

Imagine we have a computer with Windows 10 for two-year courses. The first year can access two types of students: hardware and software (2 users for each type and 1 group for the first year). The second year can access security and servers (2 users for each type and 1 group for the second year).

The users above are standard, but w

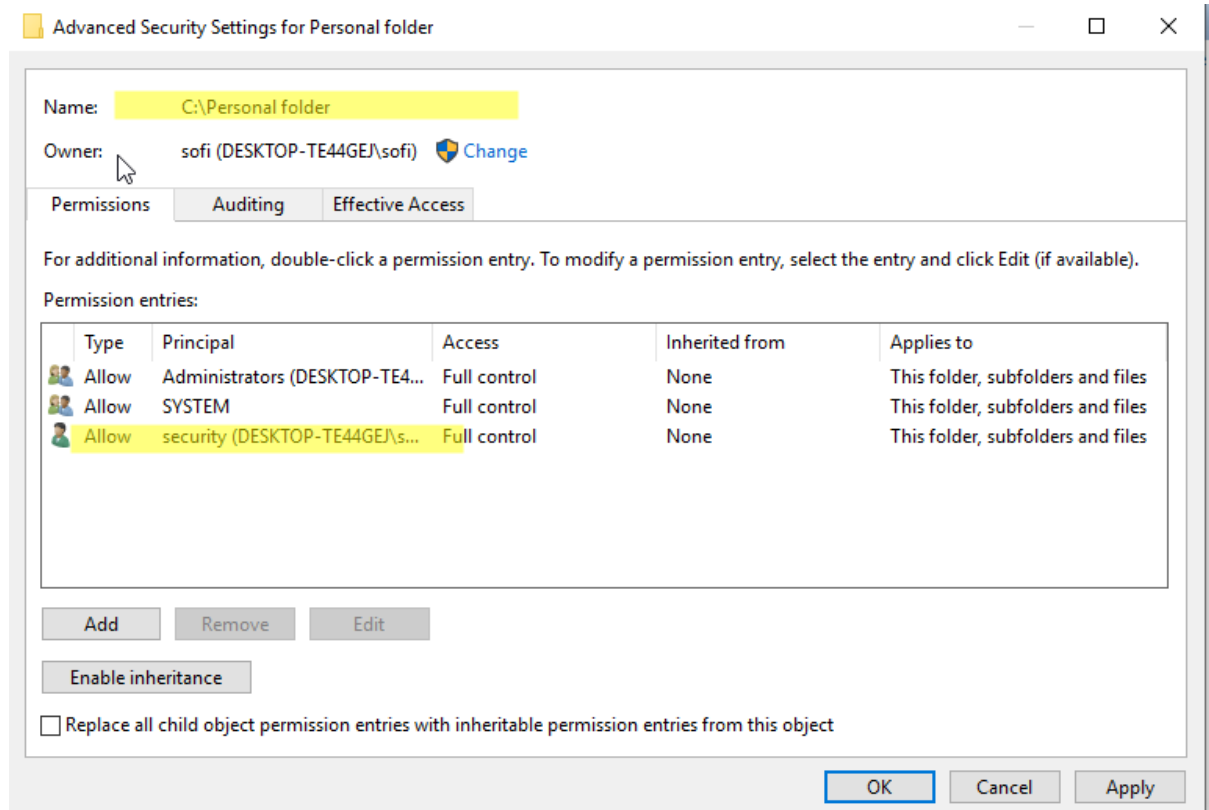

Members are authorized to perform...

We also have an advanced user called “responsible” with administrator permissions.

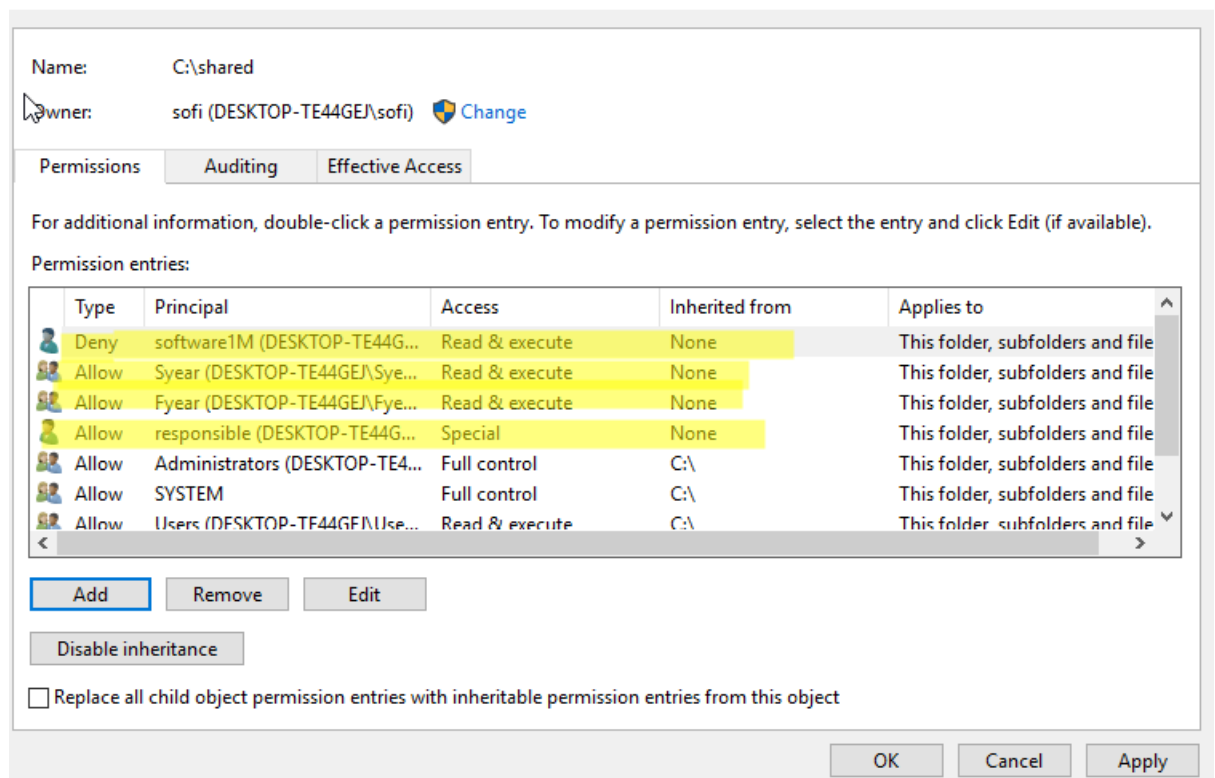

We want to create some folders in D:\ according to the following criteria:

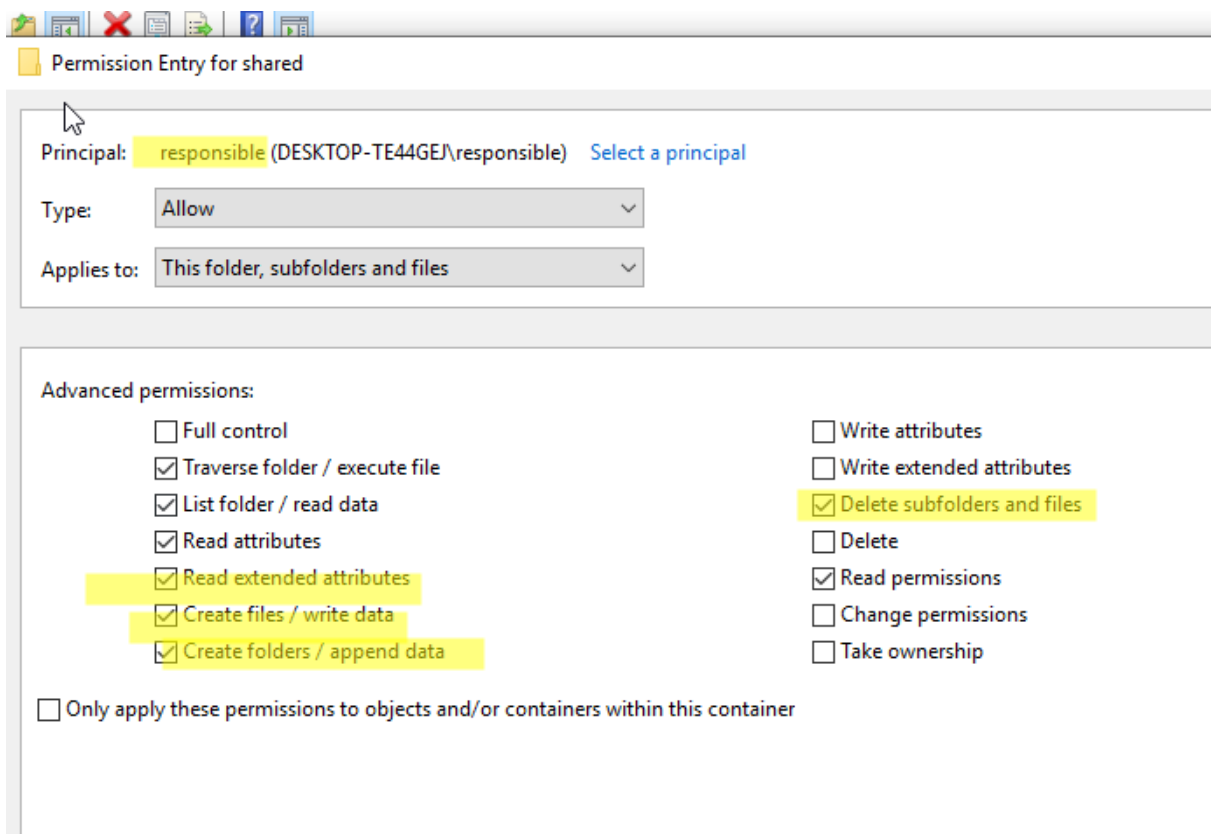

- A personal folder for each user, which can only be accessed by the corresponding user. They can do everything. You only need to create the folder for one of the users, since the others are similar. WE DISABLE INHERITANCE

- A read-only folder for all the students called “shared”. The responsible user is able to create or delete files and folders. The software user cannot access this folder.

WE KEEP THE INHERITANCE

- A folder only for first year students into the shared folder, where they can create files and folders, but not delete them. Second year students will not be able to access.

Permission Entry for Fyear

Principal: Fyear (DESKTOP-TE44GEJ\Fyear) [Select a principal](#)

Type: Allow

Applies to: This folder, subfolders and files

Advanced permissions:

<input type="checkbox"/> Full control	<input type="checkbox"/> Write attributes
<input checked="" type="checkbox"/> Traverse folder / execute file	<input type="checkbox"/> Write extended attributes
<input checked="" type="checkbox"/> List folder / read data	<input type="checkbox"/> Delete subfolders and files
<input checked="" type="checkbox"/> Read attributes	<input type="checkbox"/> Delete
<input checked="" type="checkbox"/> Read extended attributes	<input checked="" type="checkbox"/> Read permissions
<input checked="" type="checkbox"/> Create files / write data	<input type="checkbox"/> Change permissions
<input checked="" type="checkbox"/> Create folders / append data	<input type="checkbox"/> Take ownership

☐ Only apply these permissions to objects and/or containers within this container

Advanced Security Settings for Fyear

Name: C:\shared\Fyear

Owner: sofi (DESKTOP-TE44GEJ\sofi) [Change](#)

Permissions Auditing Effective Access

For additional information, double-click a permission entry. To modify a permission entry, select the entry and click Edit (if available).

Permission entries:

Type	Principal	Access	Inherited from	Applies to
Allow	Fyear (DESKTOP-TE44GEJ\Fye...	Special	None	This folder, subfolders and files
Allow	Administrators (DESKTOP-TE4...	Full control	C:\	This folder, subfolders and files
Allow	SYSTEM	Full control	C:\	This folder, subfolders and files
Allow	Users (DESKTOP-TE44GEJ\Use...	Read & execute	C:\	This folder, subfolders and files
Allow	Authenticated Users	Modify	C:\	This folder, subfolders and files

[Add](#) [Remove](#) [Edit](#)

[Disable inheritance](#)

- Do the same as above for second year students (into the shared folder too). First year students will not be able to access.
WE KEEP THE INHERITANCE

The image shows two windows from the Windows Security application. The top window, titled 'Permission Entry for Syear', displays the configuration for a specific permission entry. The 'Principal' is 'Syear (DESKTOP-TE44GEJ\Syear)', the 'Type' is 'Allow', and it 'Applies to' 'This folder, subfolders and files'. Under 'Advanced permissions', several checkboxes are selected: 'Full control', 'Write attributes', 'Write extended attributes', 'Delete subfolders and files', 'Delete', 'Read permissions', 'Change permissions', and 'Take ownership'. The bottom window, titled 'Advanced Security Settings for Syear', shows the 'Effective Access' tab for the folder 'C:\shared\Syear'. It lists five permission entries, with the first one (Allow for Syear) highlighted. Below the list are buttons for 'Add', 'Remove', and 'Edit'.

Permission Entry for Syear

Principal: Syear (DESKTOP-TE44GEJ\Syear) [Select a principal](#)

Type: Allow

Applies to: This folder, subfolders and files

Advanced permissions:

- ☐ Full control
- ☒ Traverse folder / execute file
- ☒ List folder / read data
- ☒ Read attributes
- ☒ Read extended attributes
- ☒ Create files / write data
- ☒ Create folders / append data
- ☐ Write attributes
- ☐ Write extended attributes
- ☐ Delete subfolders and files
- ☐ Delete
- ☒ Read permissions
- ☐ Change permissions
- ☐ Take ownership

☐ Only apply these permissions to objects and/or containers within this container

Name: C:\shared\Syear

Owner: sofi (DESKTOP-TE44GEJ\sofi) [Change](#)

Permissions Auditing Effective Access

For additional information, double-click a permission entry. To modify a permission entry, select the entry and click Edit (if available).

Permission entries:

Type	Principal	Access	Inherited from	Applies to
Allow	Syear (DESKTOP-TE44GEJ\Sye...	Special	None	This folder, subfolders and files
Allow	Administrators (DESKTOP-TE4...	Full control	C:\	This folder, subfolders and files
Allow	SYSTEM	Full control	C:\	This folder, subfolders and files
Allow	Users (DESKTOP-TE44GEJ\Use...	Read & execute	C:\	This folder, subfolders and files
Allow	Authenticated Users	Modify	C:\	This folder, subfolders and files

Add Remove Edit

a) Explain the users and groups required for the computer.

b) Explain the folders we need according to the criteria above.

c) Set the NTFS permissions for all the users and groups in each folder created in part B.

For the subfolders, consider two scenarios: inheritance and non-inheritance.

You can use a table similar to below.

[illegible]
