

EXERCISE 1

Suppose we have a computer that contains a folder called “tutorials” with “Full control” permissions for the standard users. We want to share the folder with “Read-only” permissions.

- It is necessary for the other computers' users to log in with a password.
 - Explain the steps needed to complete the process and the permissions we must grant in order to access the “tutorials” folder through the network. Specify the address to access the folder from the computers.
1. First we are going to change the name of the WORKGROUP(peer to peer network). If you have already created one for your group of computers, you are going to change it to that one.

2. Panel-> Network and Internet -> Network and Sharing Center-> change advanced sharing settings.

It is necessary to enable "Network discovery" and "File and printer sharing" from "Advanced sharing settings".

In the part All networks we need to enable Turn on password protected sharing.

All Networks 

Public folder sharing

When Public folder sharing is on, people on the network, including homegroup members, can access files in the Public folders.

☐ Turn on sharing so anyone with network access can read and write files in the Public folders

☒ Turn off Public folder sharing (people logged on to this computer can still access these folders)

Media streaming

When media streaming is on, people and devices on the network can access pictures, music, and videos on this computer. This computer can also find media on the network.

[Choose media streaming options...](#)

File sharing connections

Windows uses 128-bit encryption to help protect file sharing connections. Some devices don't support 128-bit encryption and must use 40- or 56-bit encryption.

☒ Use 128-bit encryption to help protect file sharing connections (recommended)

☐ Enable file sharing for devices that use 40- or 56-bit encryption

Password protected sharing

When password protected sharing is on, only people who have a user account and password on this computer can access shared files, printers attached to this computer, and the Public folders. To give other people access, you must turn off password protected sharing.

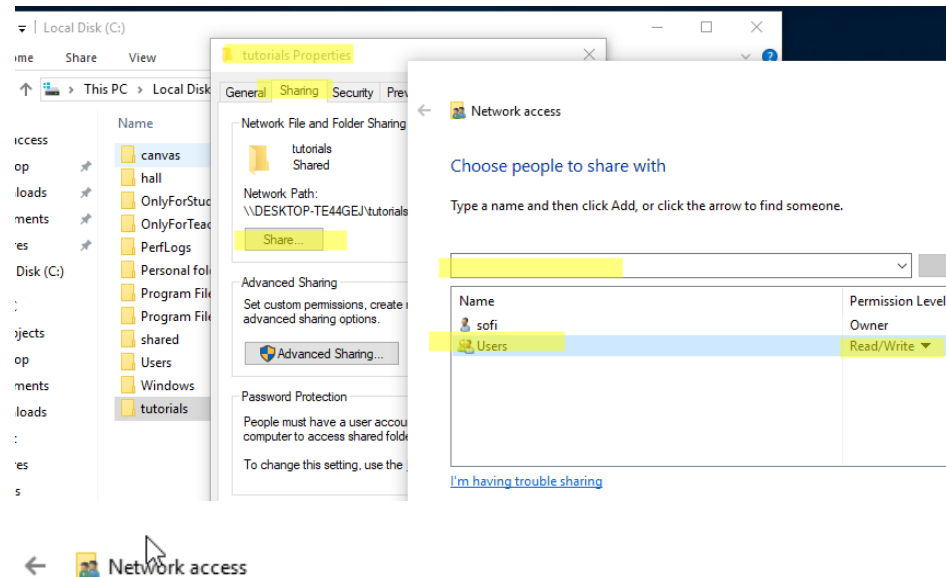

☒ Turn on password protected sharing

☐ Turn off password protected sharing

Activate Wind

3. We go to the folder that we want to share, right-click→ sharing→ share→ we add the standard users and select read and write permission.

The group users have to be in the permissions of the shared folder and NTFS Permission the more restricted one will be applied, in this case read and write permission.

Your folder is shared.

You can [e-mail](#) someone links to these shared items, or [copy](#) and paste the links into :
